

iCPM®

CONTINUOUS PASSIVE MOTION

Used during the first phase of post-surgical rehabilitation, the iCPM® is designed to reduce edema and joint stiffness, prevent soft tissue contractures and muscle atrophy, improve range of motion, and reduce pain.

BENEFITS

REDUCED PAIN

Use of the iCPM® in conjunction with our compression DVT prophylaxis and contrast therapy offerings during the the first several weeks of rehabilitation results in reduced pain and inflammation.

IMPROVED OUTCOMES

Use of the iCPM® results in improved post-operative range of motion and healing time.

MEASURED COMPLIANCE

The iCPM® is a "smart" machine; it records patient usage for the physician which is key in determining the next phase phase of patient recovery management.

USAGE

Patient use should be directed by the prescribing physician. It is recommended that each patient use the iCPM® for several hours per day during the first 2 to 3 weeks of rehabilitation.

COVERAGE

Reveille therapies are covered benefits as per Tricare Online Manual Chapter 4 Section 6.1 Musculoskeletal System. There is no cost to active duty personnel as per DOD regulations. This allows us to deliver our best-in-class equipment directly to your patients' homes at no cost to them.

COMPREHENSIVE SERVICE

Our best-in-class service providers deliver or ship (per surgeon protocols) right to military personnel residences, train military patients in the proper prescribed use of therapies, and offer support 7 days a week during the course of treatment, while taking care of insurance claims on their behalf.
